Eight years running the commercial and operational engine of a £6m environmental services group with teams in the UK and Vietnam. I own the annual and quarterly OKR framework, run the leadership operating rhythm and build the reporting infrastructure that turns strategy into delivery. I have grown revenue, won international contracts, opened a new market from zero and developed people who now manage teams of their own.

PROFESSIONAL EXPERIENCE

Group Business Manager | Wiser Environment Oct 2021 – Present

- Drive weekly leadership decisions on resourcing and investment across a £6m group with consolidated OKR, financial, risk and utilisation data from UK and Vietnam, by building and owning the Power BI reporting infrastructure end-to-end.
- Govern ~£3m in annual operating costs through the annual and quarterly planning cycle across four departments and two countries, by designing and owning the OKR framework and reporting cadence it runs on.
- Back every major investment decision across the group with written business cases and board-ready analysis I prepare; chair the senior leadership operating rhythm as the CEO's strategic partner.
- Close every quarterly leadership planning session with clear decisions and owners by designing and chairing the agenda, calibrating which debates need resolution and which need only recording.
- Unlocked a £30/hr margin differential per Senior Consultant - Vietnam at £47 vs UK at £17 - by building a role-level cost model mapping true employment cost, billable rate and utilisation across 12 staff categories; drove the decision to hire an additional Vietnam SC and shift the delivery mix, compounding the advantage across every billable hour.
- Progressed six people from admin, operative and junior roles into BDMs, compliance leads and a head of department by designing the development pathway and chairing quarterly performance reviews.
- Eliminated 20+ hours of manual invoice entry per week, reducing a full-time role to part-time, by building the AI automation workflow and governance framework after identifying the opportunity in a finance review.
- Grew Wiser's Vietnam operation from zero to £100k revenue by leading the market analysis, building the operating model and hiring locally, running the full expansion as a cross-functional programme from the UK.
- Won three Asian Development Bank contracts worth ~\$170k, one published as a named ADB deliverable in 2026, by setting pricing, scoping delivery and directing the tender response strategy for each.
- Grew three strategic key accounts to ~£2.3m in combined annual revenue by running structured account development and annual repricing across the portfolio: more than doubled Valpak to £1.75m after stepping in as emergency cover in 2023, grew Wastepack 104% to £298k and RECOLIGHT 36% to £185k.
- Grew group revenue from £5.5m to £6.2m (2023–25), beating the £6m plan, by rebuilding the rate card with YOY price increases averaging 120%, introducing specialist service rates and building an RFM model to prioritise accounts by recency, frequency and spend.
- Won a portfolio of competitive tenders from local authorities and corporates by writing, pricing and directing every submission: Bedford Borough Council (£100k+, leading to Wiser's management role on the multi-million Bedford Green Energy Park), Buckinghamshire Council (£50k), South Cambridgeshire District Council (the BBC News pink-bin scheme) and ERP UK Ltd (grown to £30k/month).
- Restored watertight WEEE compliance after weight reconciliation errors triggered regulatory scrutiny, by rebuilding the evidence system into a 13-sheet model that validates weights across internal and external reconciliation and produces the AATF returns submitted to the Environment Agency.
- Opened a new revenue line selling Wiser's reporting infrastructure to clients by identifying and driving it as a quarterly objective; first deliverable was Power BI dashboards evidencing ISO 14001 and ISO 50001 compliance within a £142k Intercontinental Exchange account.
- Selected as a subject-matter expert for the UKRI RiSC+ programme on electrical recycling and UK critical minerals strategy.

Communications Manager | Wiser Environment *Sep 2020 – Oct 2021*

- Rebranded the Wiser Group across both businesses under a unified identity and visual language by instigating and leading the project, securing grant funding to offset the cost.
- Grew organic traffic from 3,596 to 21,452 and combined web traffic from 6,434 to 68,360 (2021–25) by rebuilding the website and SEO strategy from scratch, continuing to direct it after promotion to GBM.
- Won and delivered a consumer booking platform for Bradford Metropolitan District Council, now processing 200 transactions and £4,000/month in place of their kerbside collection system, funded by Wastepack and built on the website infrastructure I owned.
- Returned £67,068 on £13,500 of spend with a PPC campaign for fluorescent tube recycling, designed and run within the £150k+ marketing budget I managed across the function.
- Replaced Excel-based order management with a HubSpot CRM I built from scratch, evaluated against Salesforce and configured end-to-end.
- Developed the marketing executive into function lead; retained strategic oversight of the function at one level up following promotion to GBM.

Environmental Consultant | Wiser Environment *Apr 2018 – Sep 2020*

- Grew candidate numbers on Wiser's CIWM-accredited waste-site management training programme tenfold, from 20 to 200 per year, by redesigning delivery planning and capacity; identified and coached a successor who now heads the Training function.
- Kept client operations permitted and compliant, from SMEs to large producers, by running their environmental compliance programmes and working directly with the Environment Agency, HSE and local authorities.

VOLUNTEERING

Research Assistant | Papworth Trust *Dec 2014 – Jun 2015*

- Analysed accessibility survey data from 799 disabled rail passengers for Papworth Trust's Improving Rail Travel for Disabled Passengers in Britain. Built the case that targeting 255 stations would make two thirds of journeys accessible, shaping recommendations to the Office of Rail Regulation on franchise KPIs and open data. First time I saw my own analysis end up in a national report, and it set how I've worked since: find the figure that makes the argument unarguable.

EDUCATION & QUALIFICATIONS

BSc Business Management - 1st Class Honours & Valedictorian *Anglia Ruskin University, 2014–2017*
